

Our BioBlitz

How many areas have you surveyed? List the different "microhabitats" below:

Which microhabitat had the most number of species?

Which microhabitat had the least number of species?

How can you improve the microhabitat that had the least species?

Which species did you find most frequently?

Why do you think this species is most common in your school? - is there a particular resource/habitat type/food source that you have a lot of in the school grounds?
